

## INFORMATION FOR PATIENTS

---

# Visual field testing

---

Your doctor has ordered a visual field test for you. This booklet explains what the test is, how it is undertaken and what you should expect afterwards.

### About the test:

- The examination can take up to 15 minutes per eye.
- The test determines how well you see out of the corner of your eyes.
- The examination is done by a machine called a Humphrey Field Analyser.
- The test is not difficult, but you should be familiar with certain aspects before the test.
- You should bring your glasses or contact lenses for this test.
- Please read this leaflet before the test.

### Do I need to do anything before the test?

You do not need to do anything special before the test.

### Do I need to bring anything with me for the test?

- You should bring your most recent glasses or contact lenses.
- If you do not have glasses you should bring your most recent prescription from your optician.

### The test:

- It is important you hold your eyes still and keep looking straight ahead.
- Inside the machine is a yellow light for you to look at - unless instructed otherwise you should stare at this all the time.
- The test light will flash on and off randomly at different places within the machine. You will be given a response button to press. You should press the button whenever you think you have seen the light.
- If you feel you want to blink the best time is after you have pressed the button.
- Some lights will be brighter than others. Some lights will be too dim to see and there are periods when you will not see anything. Do not be alarmed. The machine purposely does this as it measures the sensitivities of different parts of your eye.
- You will hear various noises as the light projector moves and as the shutter opens and closes. Ignore these noises and respond only to the light.
- It is important you are comfortably seated with your forehead pushed as far as possible into the machine.

- If you are not comfortable or the fixation light is not in focus, tell the assistant immediately.
- If you wish to pause during the examination hold down the response button. The machine will beep and alert the assistant to pause the test.

It is hoped this information will make visual field testing easier for you. Please ask the assistant or the doctor about anything which is not clear to you.

#### **After the test:**

- The test is not expected to cause you any problems.
- You do not need to be accompanied for this test.
- The test will not affect your ability to drive.
- The test will not affect your ability to do usual chores at home.

You will be sent a letter following your visit.

#### **Risks and benefits:**

- There are no side-effects from this test.
- If you feel something is wrong, you should alert the attending assistant.
- The test helps the doctor make the right decisions about your eye problems.
- If we do not have the test result, the doctor may not be able to discuss them with you and make a decision about your eye problem.

#### **Contact details**

If you require further information please contact:

- Ophthalmology Department  
King's Mill Hospital

Telephone: 01623 622515, extension 3795 or 6654

- Outpatient Department  
Newark Hospital  
Telephone: 01636 685798
