Using elbow crutches

If you are viewing this leaflet online, please click on all video links to watch information videos. If you have a paper copy, please copy the link into your browser.

1. To go up stairs (<https://www.youtube.com/watch?v=3GhzY3AvNVU>)

- Hold the handrail with one hand and the crutch in the other hand, with the 2nd crutch held on the outside handle using your fingers to grip.
- Step up first with your good leg.
- Step up with your affected leg.
- Bring the crutch up onto the same step you are standing on.
- Do only one step at a time.

To go down stairs:

- First place your crutch on the next step down.
- Step down with your affected leg.
- Step down with your good leg onto the same step.
- Do only one step at a time.

2. How to stand up from a chair using elbow crutches

(https://www.youtube.com/watch?v=9ZI41bkTb_Y)

- Place both crutches in front of you to make a letter H shape.
- Hold the chair arm with one hand and the crutches with your other hand.
- Push up from the chair using your strongest leg.
- Only once you are stood you can put your arms in the crutches.

Note: Attempting to stand up with your arms placed in the elbow crutches may result in an injury to the shoulder or arm.

Sitting down using elbow crutches:

- Step backwards to the chair until you feel the back of your legs touch the chair.
- Take both arms out of the elbow crutches.
- Hold the chair arm with one hand and the crutches with your other hand.
- Gently lower yourself down.

Note: Attempting to sit down with your arms still placed in the elbow crutches may result in an injury to the shoulder or arm.

3. How to go up and down a step using elbow crutches

(<https://www.youtube.com/watch?v=bFzgofiuACk>)

To step up:

- Walk close up to the step.
- Step up with your good leg.
- Step up with your affected leg.
- Bring the crutches up onto the step.

To step down:

- Place your crutches down the step and in front of you.
- Step down first with your affected leg.
- Step down with your good leg.

4. How to go up and down a step (non weight bearing) using elbow crutches

To step up:

- Approach close to the step.
- Use your crutches for support as you use your good leg to hop up onto the step.
- Bring your crutches up onto the step.

To step down:

- Place your crutches down the step and in front of you.
- Use your crutches for support as you use your good leg to hop down.

5. How to use elbow crutches – full weight bearing

- Place both crutches out in front of you and slightly out to the side.
- Step with your affected leg first – make sure you don't step past the crutches.
- Step with your good leg, bringing it level with your affected leg.

6. How to use elbow crutches – partial weight bearing

- Place both crutches out in front of you and slightly out to the side.
- Take a small step with your affected leg first – make sure you don't step past the crutches.
- Only put the equivalent to approximately 20-30% of your body weight through your affected leg.
- Step with your good leg, bringing it level with your affected leg – you should still be slightly behind the crutches at this point . This enables you to maintain a good base of support for balance.

7. How to use elbow crutches – touch weight bearing

A good way of making sure you are **TOUCH WEIGHT BEARING** is to imagine that you are stepping with your affected leg onto an egg shell, putting only a small amount of pressure through your leg so as not to break the shell:

- Place both crutches out in front of you and slightly out to the side.
- Take a small step with your affected leg first – make sure you don't step past the crutches.
- Step with your good leg, bringing it level with your affected leg – you should still be slightly behind the crutches at this point . This enables you to maintain a good base of support for balance.
