

INFORMATION FOR PATIENTS

Parkinson's

Bed-based exercises

Exercise is still **important** and **beneficial** even in the more advanced stages of Parkinson's disease.

The exercises below are general bed-based exercises, designed to build into your routine at home. They can help with function, stamina, strength, flexibility, sleep and fatigue, pain, balance and mood.

General tips:

- Aim to complete little and often as part of your daily routine.
- Think of your exercises like your medication; if you don't take it regularly it won't work.
- When exercising aim to make your movements as big and powerful as you can.
- Aim to complete each exercise for 30 seconds.
- Don't push into any significant pain or resistance.
- Talk to the therapy team should you have any concerns.

Chest stretch:

- Take your arms as wide as possible, make them as long as possible including your fingers then, clap your hands together.

Arm stretch:

- Punch your arm up towards the ceiling. Repeat on the other side.

Knee rocks:

- Bend your knees and rock them from side to side.

Knee bend:

- Bend one knee to place your foot flat on the bed then straighten it back down. Repeat on both sides.
