

INFORMATION FOR PATIENTS

Aircast boot

This leaflet is intended as further help to patients who have been supplied with an Aircast boot. If advice in this leaflet differs from what you have been told on the ward or in clinic, wear as directed by the physiotherapist /orthotist, as this will be specific advice to your individual needs.

Your Aircast boot

Aircast boots are prescribed to support the ankle along with restricting or limiting motion. This may be necessary to:

- Protect the ankle prior to surgical repair following an injury.
- Protect the ankle following surgical repair.
- Prevent instability due to muscle weakness.

When should I wear my boot?

You should wear your boot all the time unless instructed otherwise by your consultant. You will, however, need to remove for washing, skin checks and any exercises provided by your physiotherapist.

You should ensure you remove your boot at least twice a day to ensure there is no skin damage.

If you notice any skin damage or irritation, please contact either the orthotic or physiotherapy department, or your GP.

Fitting your boot

The Aircast boot should be fitted while sitting down.

If a sock or tubigrip has been provided, please ensure it is fitted smoothly, without any creases.

Apply the liner ensuring your heel is pushed fully inside. Fasten the Velcro on the foot and leg sections firmly but not too tight. Attach the toe cover if required.

With the liner applied, place your foot into the Aircast boot with your heel comfortably secured at the back of the plastic shell. Apply pressure to fix the liner to the shell.

Fix the front plastic shell to the front of the liner ensuring that where the shell bends, it aligns with the bend of your ankle on top of your foot. Fasten the straps from the toes up, ensuring they are firm and comfortable, but not too tight.

Press the air pumps to inflate the air cells to the required level. Both pumps can be pressed simultaneously for balanced pressure. Do not over inflate – your Aircast boot should be snug, secure and comfortable.

Removing your boot

The Aircast boot should be removed while sitting down.

Before undoing the straps, open the caps next to the pumps and press the valves to deflate the air cells.

Undo all three straps in any order. Remove the front plastic shell from the front of the liner.

Open the liner and remove your lower leg. The liner should remain attached to the inside of the shell of the Aircast boot.

If you experience difficulty removing your leg easily after the following steps, try removing any excess air in the air cells. This can be achieved by applying pressure on the air cells with your hand, while holding down the deflation valve.

A video demonstration of how to fit and adjust the Aircast boot can be found at: <https://www.youtube.com/watch?v=rZTsrNnNFuw>

Care instructions

Remove the liner from the plastic shell before laundering. Hand wash the liner in warm water with mild detergent. Lay the liner flat and allow it to air dry.

Clean the plastic shell using a damp cloth with mild detergent.

IMPORTANT

DO NOT put any part of the Aircast boot in a washing machine or tumble dryer.

The sock/tubigrip can be machine washed, and then air dried.

Your boot has been fitted by:
