INFORMATION FOR PATIENTS

Bites and stings

Emergency Department

King's Mill Hospital

Mansfield Road
Sutton in Ashfield
Notts NG17 4JL
Telephone: 01623 622515, extension 2789

Newark Hospital

Boundary Road
Newark
Notts NG24 4DE
Telephone: 01636 681681

Stings and insect bites may cause an inflammatory reaction, which may cause the area to become red, inflamed and itchy. Within the first 48 hours, these symptoms are usually not due to infection.

Scratching will make the symptoms worse.

Treatment:

- A cold compress (e.g. a cold wet flannel) may relieve symptoms, however, heat may increase the symptoms.
- Creams (antihistamine), may be applied as instructed by the practitioner
- Tablets (antihistamine), may be taken as instructed by the practitioner. These tablets may cause drowsiness - do not operate heavy machinery, drive a vehicle or drink alcohol if you feel drowsy.

Antibiotics

If you have been given antibiotics, it is important that you complete the whole course. If you think you have developed a reaction to this medication, contact your GP/NHS 111 or return to the Emergency Department.

If the redness continues to spread over the next few days, or if you develop flu like symptoms, the bite may have become infected. If this occurs, contact your GP/NHS 111 or return to the Emergency Department.

Do not worry if your wound is itchy, is slightly red close to the wound or has a slight discharge - this is part of the healing process.

Pain relief medication

To manage your pain, we advise that you regularly take simple pain relief which can be bought over the counter at a pharmacy.

If you have allergies or conditions which prevent the use of pain-relieving or anti-inflammatory medication, please seek advice from your GP or a pharmacist.

Should you require further advice on the issues contained in this advice sheet, please do not hesitate to contact the Emergency Department – details are on the front of this leaflet.
